

# TrashDash — Attribution Tracking & Submissions Guide

---

## What Is This?

TrashDash has a built-in system for **tracking where your business comes from** and **capturing every lead** that comes through your website. It has two parts:

1. **Tracking Links** — Every crew member, billboard, flyer, online ad, or promotion gets its own unique link and QR code. When a customer uses that link to request service, the system records who or what sent them.
2. **Form Submissions** — Every quote request and quick service request submitted through your website is saved to your database automatically. You can view them, see which tracking links are performing, and export the data.

This means you can answer questions like:

- "How many leads did Mike bring in this month?"
  - "Is that billboard on I-15 actually driving business?"
  - "Did the spring cleanup promo flyers work?"
  - "How many total requests did we get this month?"
- 

## Part 1: Tracking Links

### What Are Tracking Links?

A tracking link is a special URL that looks like your normal website, but with a small code added to the end. For example:

- Normal: trashdash.com/quick-request
- Mike's link: trashdash.com/quick-request?ref=mike

When someone uses Mike's link, the system knows Mike sent them.

### How to Create a Tracking Link

1. Go to **trashdash.com/tracking**
2. Click the green **"+ New Tracking Link"** button
3. Fill out the form:
  - **Name** — A descriptive label (e.g. "Mike - Crew Referral" or "I-15 South Billboard")
  - **Slug** — The short code used in the URL (e.g. "mike" or "i15-south"). Keep it simple, lowercase, no spaces
  - **Category** — How you want to group it (e.g. "Crew", "Billboard", "Flyer", "Online Ad"). You can type anything — categories are whatever you want
  - **Notes** — Optional extra context (e.g. "Installed March 2026, expires Dec 2026")
4. Click **"Create Link"**

### Getting the QR Codes

Each tracking link gets two QR codes:

- **Quote Page** — Links to the full quote form

- **Quick Request** — Links to the mobile-friendly quick form

Click the "**Download QR**" button under any QR code to save it as a high-resolution PNG image (600x600 pixels — good for print on flyers, magnets, business cards, vehicle wraps, and signs).

## How to Use Tracking Links

### For Crew Members:

- Give each crew member their Quick Request QR code
- They can save the QR code image on their phone to show customers on-site
- They can text or share the link directly with potential customers
- Print it on a card or magnet to leave behind after a job

### For Physical Advertising (Billboards, Signs, Flyers):

- Download the QR code and give it to your printer or designer
- Put it on billboards, yard signs, door hangers, vehicle wraps, mailers

### For Online Campaigns:

- Share the URL directly (not the QR code) for digital marketing
- Use as the destination URL in Facebook ads, Google Ads, Instagram bio, or email campaigns

## Managing Tracking Links

- **Edit** — Click "Edit" on any link card to change the name, slug, category, or notes
- **Delete** — Click "Delete" to remove a link permanently
- **Filter** — Use the category chips at the top to view only one category at a time

## Suggested Categories

| Category  | Use For                                 |
|-----------|-----------------------------------------|
| Crew      | Individual crew member referral links   |
| Billboard | Physical billboard and sign advertising |
| Flyer     | Printed flyers, door hangers, mailers   |
| Online    | Facebook ads, Google ads, social media  |
| Promotion | Seasonal deals, special offers          |
| Partner   | Realtor referrals, property managers    |
| Vehicle   | Truck wraps, vehicle magnets            |

You can create any category you want — these are just suggestions to get started.

---

## Part 2: Form Submissions

### Where Do Submissions Go?

Every time a customer submits the quote form or quick request form on your website, the submission is automatically saved to your database. This includes:

- Customer name, phone, email, address

- What they described needing removed
- Which tracking link sent them (if any)
- The date and time

## Viewing Submissions

1. Go to [trashdash.com/tracking](https://trashdash.com/tracking)
2. Click "**View Submissions**" in the header
3. Or go directly to [trashdash.com/tracking/submissions](https://trashdash.com/tracking/submissions)

## Understanding the Dashboard

At the top of the submissions page, you'll see four stat cards:

- **Total Submissions** — All-time count of form submissions
- **This Month** — How many submissions you've received in the current month
- **Top Source** — Which tracking link has driven the most submissions (and how many)
- **By Type** — Breakdown of quote requests vs. quick requests

## Reading the Submissions Table

Each row in the table shows:

| Column        | What It Means                                                                      |
|---------------|------------------------------------------------------------------------------------|
| <b>Date</b>   | When the customer submitted the form                                               |
| <b>Name</b>   | Customer's name                                                                    |
| <b>Phone</b>  | Customer's phone number                                                            |
| <b>Type</b>   | "quote" (full form) or "quick-request" (mobile form)                               |
| <b>Source</b> | Which tracking link sent them (e.g. "mike"), or "direct" if they came on their own |
| <b>CRM</b>    | Whether the submission was forwarded to your CRM (see below)                       |

**Click any row** to expand it and see the full details: address, email, description of what they need removed, and exact submission time.

## Exporting Data

Click the "**Export CSV**" button to download all submissions as a spreadsheet file. You can open this in Excel, Google Sheets, or any spreadsheet program. Useful for:

- Monthly reporting
- Crew compensation calculations
- Importing into other systems

---

## Part 3: CRM Integration (Webhook)

### What Is the CRM Webhook?

A webhook automatically sends each new form submission to your CRM (or any other system) the moment it's received. You don't have to check the submissions page — your CRM gets notified instantly.

## How to Set It Up

1. Ask your CRM provider for a **webhook URL** (sometimes called an "incoming webhook" or "API endpoint")
2. Go to the Convex dashboard: **dashboard.convex.dev**
3. Select the **trashdash** project
4. Go to **Settings > Environment Variables**
5. Add a new variable:
  - Name: **CRM\_WEBHOOK\_URL**
  - Value: the webhook URL from your CRM
6. Save

That's it. Every new form submission will now be automatically sent to your CRM.

## What Gets Sent

Each submission is sent as a JSON payload containing:

- Form type (quote or quick-request)
- Customer name, phone, email, address
- Description of what they need removed
- The tracking link attribution code (ref)
- Submission timestamp

## Webhook Status Indicators

On the submissions page, the **CRM** column shows:

| Status                  | Meaning                                    |
|-------------------------|--------------------------------------------|
| <b>sent</b> (green)     | Successfully forwarded to your CRM         |
| <b>failed</b> (red)     | Failed to forward — check your webhook URL |
| <b>pending</b> (yellow) | Currently being sent                       |
| <b>none</b> (gray)      | No CRM webhook is configured               |

If you see "none" for all submissions, it means the CRM\_WEBHOOK\_URL hasn't been set up yet. This is normal — submissions are still being saved in your database regardless.

---

## Quick Reference

| What                      | Where                                       |
|---------------------------|---------------------------------------------|
| Manage tracking links     | trashdash.com/tracking                      |
| View submissions & stats  | trashdash.com/tracking/submissions          |
| Create a new link         | Click "+ New Tracking Link" on /tracking    |
| Download a QR code        | Click "Download QR" under any QR code       |
| Export submissions to CSV | Click "Export CSV" on /tracking/submissions |

Connect your CRM

Add CRM\_WEBHOOK\_URL in Convex dashboard settings

---

## Important Notes

- **QR codes are print-ready** — Downloaded at 600x600px, suitable for any print material
- **Links never expire** — Once created, a tracking link works forever unless you delete it
- **Customers see nothing different** — The forms look exactly the same whether they came from a tracking link or not
- **Data is always saved** — Even if the CRM webhook isn't set up or fails, submissions are stored in your database
- **The /tracking pages are not public** — They won't show up in your site navigation or search engines
- **You can create unlimited links and categories** — There's no limit
